## 1 Interlaboratory comparison test: Sum parameters SP02

### 1.1 Participants and time schedule

- Number of registrations: 31
- Number of submitted data records: 31
- Dispatch of samples: 30<sup>th</sup> May 2017
- Closing date for submission of data: 27<sup>th</sup> June 2017

To anonymize results, each laboratory was given a laboratory code on a random basis. Due to an error at the dispatch, the laboratory code LC0012 is omitted.

### 1.2 Sampling, sample material and distribution

The following samples were made available

- synthetic water (Sample A)
- ground water (Sample B)

The sampling of ground water was carried out on 26<sup>th</sup> May 2017. The sample was stored at < 4 °C until further processing.

The samples for the HC-Index (SP02 A KWI and SP02 B KWI) were prepared on 29<sup>th</sup> May 2017 and stored at < 4 °C.

The samples for the Phenol Index (SP02 A PHE and SP02 B PHE) were prepared at the day of dispatch. For stabilisation they were brought to pH < 4 with phosphoric acid and 1 g/L Copper sulfate pentahydrate was added.

All samples were spiked with the corresponding substances.

The homogenous samples were dispatched on 30<sup>th</sup> May 2017.

Each participant received:

- 2 samples (each 2000 ml), each filled in 2x 1000 ml glas bottles for the assay of HC-Index

Depending on thier order, serveral laboratories also received:

- 2 samples (each 2000 ml), each filled in 2x 1000 ml glas bottles for the assay of phenol Index

### 1.3 Control testing

During filling the bottles, aliquots of each sample were collected randomly for control testing at the Environment Agency Austria. Testing was performed close to the time of sample dispatch. The phenol index was determined by an external laboratory.

In the parameter-oriented evaluation, the results of the control testing are given in the form of arithmetic means of the detected concentrations as check value  $\pm U$ .

## 2 Evaluation

The analytical results had to be made available to the organiser not later than 27<sup>th</sup> June 2017. Any values received at a later date were not considered. A statistical evaluation of interlaboratory comparison data was only carried out if at least 6 valid results per parameter were available.

To evaluate the data, outliers were detected first by using the outlier test method according to Hampel. Values identified as conspicuous by this test method are marked specifically in the parameter-oriented evaluation. Further evaluation was performed in accordance with DIN ISO 5725-2. Results < LOQ or < LOD are not taken into account for calculation.

The adjusted average value (after removal of outliers) for all submitted results was used as a basis for the calculation of recovery rates and z-scores.

### z-Score

z-Scores were calculated on the basis of the following formula:

$$z\text{-score} = \frac{x_i - \bar{X}}{SD}$$

In this context,

- $x_i$  is the measurement value of the participating laboratory.
- $\bar{X}$  is the adjusted average value (i.e. after removal of outliers) of the participants' results.
- $SD$  is the reproducibility standard deviation, calculated from the participants' results (after removal of outliers) in the relevant test round.

### Interpretation of z-Scores in the parameter-oriented evaluation:

- $|z| < 2$  result: good
- $2 < |z| < 3$  result: questionable
- $|z| > 3$  result: not satisfactory

## 3 Representation and interpretation of measurement results

The parameter oriented report shows the measurement values including uncertainty, recovery rate, calculated z-Score and the outliers in tabular form. The results listed in the table are also represented graphically.

The laboratory oriented report shows the results of the individual laboratories, including the recovery rates and z-Scores.

An annotation of the tables and graphics is given in section 5.

## 4 Explanatory notes

As explained in section 2, the z-Score is calculated using the reproducibility standard deviation, calculated from the participants' results (after removal of outliers) in the relevant test round. As a consequence it might occur that the z-Score between -2 and 2 covers an extraordinary range, due to a high variance of the results. On the other hand, a low variation of the participants' results leads to an extraordinary small recovery rate range when applying a z-Score of -2 to +2.

The recovery rate is calculated for the individual result based on the target value. Therefore, in the case of a high variance of the results, participants should also consider recovery rates as an indicator for the necessity of internal quality assurance measures.

At this Interlaboratory comparison test the HC-Index in both samples shows a high variance of the results.

If low results were received we recommend to check, if the entire bottle was extracted and/or rinsed with solvent to exclude adsorption effects on the glass wall.

## 5 Annotations on tables and charts

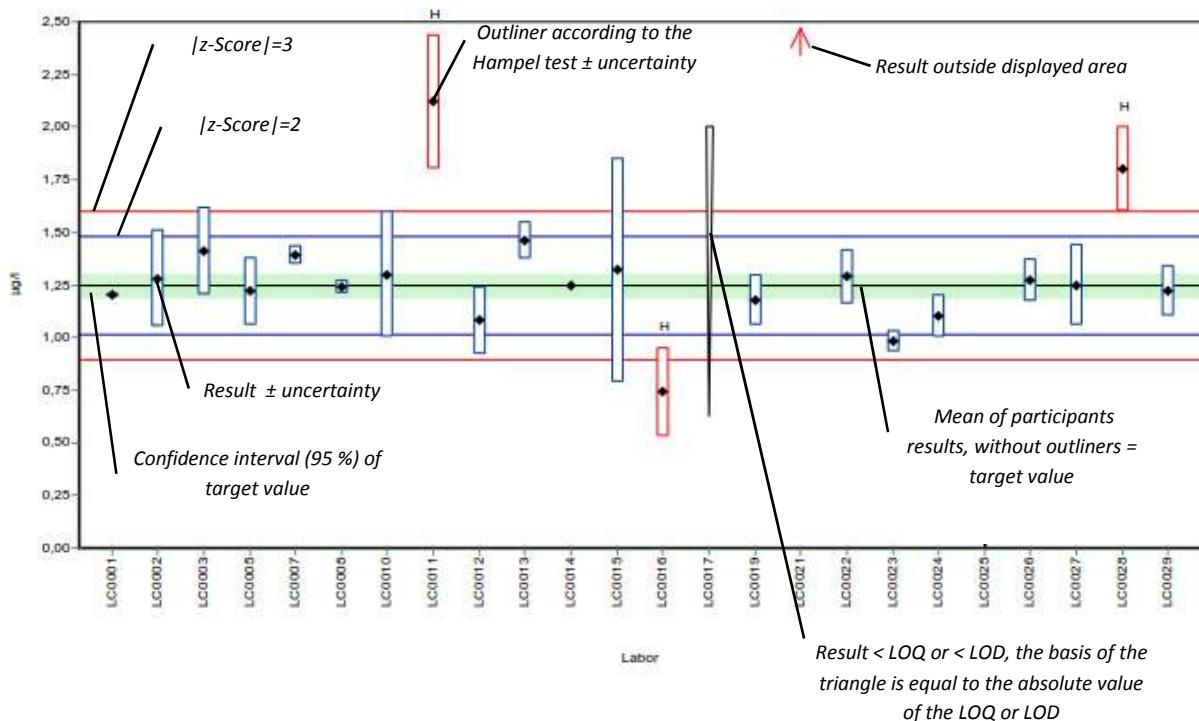

### 5.1 Information and abbreviations in tables

Parameter	Analyte identifier
Sample	Sample identifier
Unit	Given unit for result and uncertainty (e.g. µg/l)
Mean	Mean of the participants results, without outliers (3 significant digits)
CI (99 %)	99% confidence interval (3 significant digits)
Minimum	Minimum of all submitted results, after removal of outliers (3 significant digits)
Maximum	Maximum of all submitted results, after removal of outliers (3 significant digits)
SD	Reproducibility standard deviation, calculated from the participants results, after removal of outliers (3 significant digits)
RSD %	Reproducibility standard deviation, calculated from the participants results relative to the target value, given in %, after removal of outliers (2 significant digits)
Check value ± U	Mean of check value ± measurement uncertainty (3 significant digits)
Labcode	Laboratory identifier (anonymized)
Result	Result as indicated by participant (max. 5 decimal places)
± U	Results uncertainty as indicated by participant (max. 5 decimal places)
LOQ	Limit of quantification
LOD	Limit of detection
Recovery	Recovery rate in % based on target value (3 significant digits, max. one decimal place given)
z-Score	Deviation of result based on target value depicted as a multiple of the criteria (3 significant digits, max. 2 decimal places given)
-	<i>No data available</i>
Comments	Comment on the respective result (e.g. H, FN, FP)
H	Outlier according to Hampel-Test
FN	False negative – for a result < LOQ or result < LOD: The absolute value of the LOQ or LOD fulfils the condition of an outlier according to the Hampel test.
FP	False positive – for parameters where no target value is available because of a too low analyte content (n < 6):

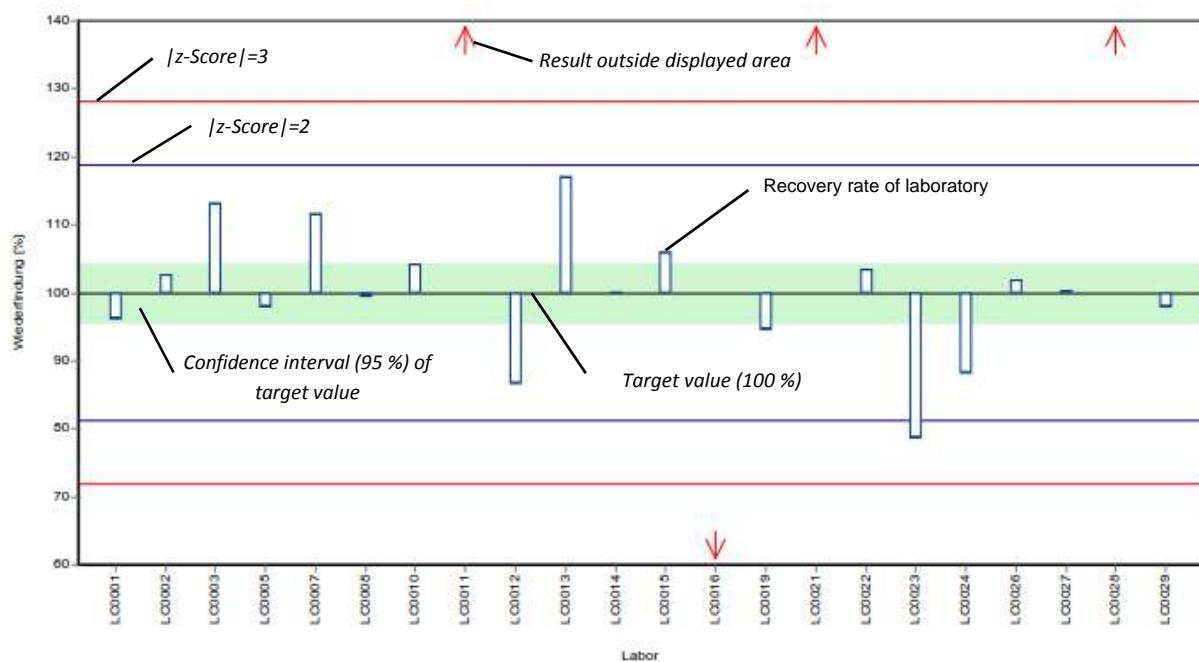

Standard deviation	Result that exceeds the median of the absolute values of the transmitted LOQs or LODs by more than 100 %.
Rel. standard deviation	Reproducibility standard deviation, calculated from the participants results (3 significant digits)
n	Reproducibility standard deviation, calculated from the participants results relative to the target value, given in %, (3 significant digits)
Target value	Number of results
Criteria	Mean of the participants results, without outliers (3 significant digits)
	Criteria for z-Score calculation. The given value matches the reproducibility standard deviation, calculated from the participants' results, after removal of outliers (3 significant digits).
