

# **INTERLABORATORY COMPARISON EVALUATION**

## **Herbicides H93**

Sample dispatch on 6<sup>th</sup> October 2015

**Address:** Umweltbundesamt GmbH

Spittelauer Lände 5

1090 Vienna/Austria

**Contact:** Dr. Sandra Kulcsar

**Telephone:** +43 (0) 1 31304 4334

**E-mail:** [ringversuche@umweltbundesamt.at](mailto:ringversuche@umweltbundesamt.at)

**Website:** [www.umweltbundesamt.at/en/services/](http://www.umweltbundesamt.at/en/services/)  
[www.ifatest.at](http://www.ifatest.at)

**Management:**

Dr. Sigrid Scharf

## 1 Interlaboratory comparison H93

### 1.1 Participants and time schedule

- Number of registrations: 17
- Number of submitted data records: 17
- Dispatch of samples: 6<sup>th</sup> October 2015
- Closing date for submission of data: 3<sup>rd</sup> November 2015  
Postponed to 10<sup>th</sup> November 2015

To anonymise results, each laboratory was given a laboratory code on a random basis.

### 1.2 Sampling, sample material and distribution

Groundwater and synthetic water were selected as sample material. The sampling of the groundwater was carried out on 3<sup>rd</sup> October 2015. The samples were stored at < 4 °C until further processing. The water was partly spiked with specific substances. The samples were filled into bottles with continuous stirring. The homogeneous mixtures were dispatched on 6<sup>th</sup> October 2015. Each participant received:

- 2 samples, filled in 300 or 1000 ml aluminium bottles, respectively.

### 1.3 Check analysis

While filling the bottles, aliquots of each sample were collected at random moments for check analytics. Testing was performed 8 days after sample dispatch.

In the parameter-oriented evaluation, the results of the check testing are listed in the form of arithmetic means of the detected concentrations as check value  $\pm U$ . The uncertainties of the check value were calculated as extended uncertainties ( $k=2$ ).

## 2 Evaluation

The analytical results had to be made available to the organiser not later than 10<sup>th</sup> November 2015. Any values received at a later date were not considered. A statistical evaluation of interlaboratory comparison data was only carried out if at least 6 valid results per parameter were available.

To evaluate the data, outliers were detected first by using the outlier test method according to Hampel. Values identified as conspicuous by this test method are marked specifically in the parameter-oriented evaluation. Further evaluation was performed in accordance with DIN ISO 5725-2. The adjusted average value (after removal of outliers) for all submitted results was used as a basis for the calculation of recovery rates.

### **z-Score**

z-Scores were calculated on the basis of the following formula:

$$z\text{-score} = \frac{x_i - \bar{X}}{\sigma}$$

In this context,

- $x_i$  is the measurement value of the participating laboratory.
- $\bar{X}$  is the adjusted average value (i.e. after removal of outliers) of the participants' results.
- $\sigma$  is the reproducibility standard deviation, calculated from the participants' results (after removal of outliers) in the relevant test round.

### **Interpretation of z-Scores in the parameter-oriented evaluation:**

- $|z| < 2$ : result: good
- $2 < |z| < 3$ : result: questionable
- $|z| > 3$ : result: not satisfactory

### 3 Representation and interpretation of measurement results

The parameter-oriented evaluation shows the measurement values including uncertainty, recovery rate, calculated z-Score and the outliers in tabular form. The results listed in the table are also illustrated in graphical form (see 5 Explanatory notes on the parameter oriented report)

### 4 Explanatory notes

None.

### 5 Explanatory notes on the parameter oriented report

Mean ± CI (99%)      *Mean of the participants results, without outliers ± 99% confidence interval*

Minimum – Maximum      *Minimum and maximum of all submitted results, after removal of outliers*

Check value ± U      *Mean of check value ± expanded uncertainty (k=2)*

Labcode	Result	± U	Recovery [%]	z-score	Comments
LC0001	0.015	0.0001	89.7	-0.5	
LC0002	0.0148	0.003	88.5	0.6	
LC0003	-	-	-	-	
LC0004	-	-	-	-	
...					
LC0009	0.100	0.01	597.9	24.2	H

#### Symbols and abbreviations:

± U      Results uncertainty as indicated by participant

-      *No data available*

Possible remarks in the column comments:

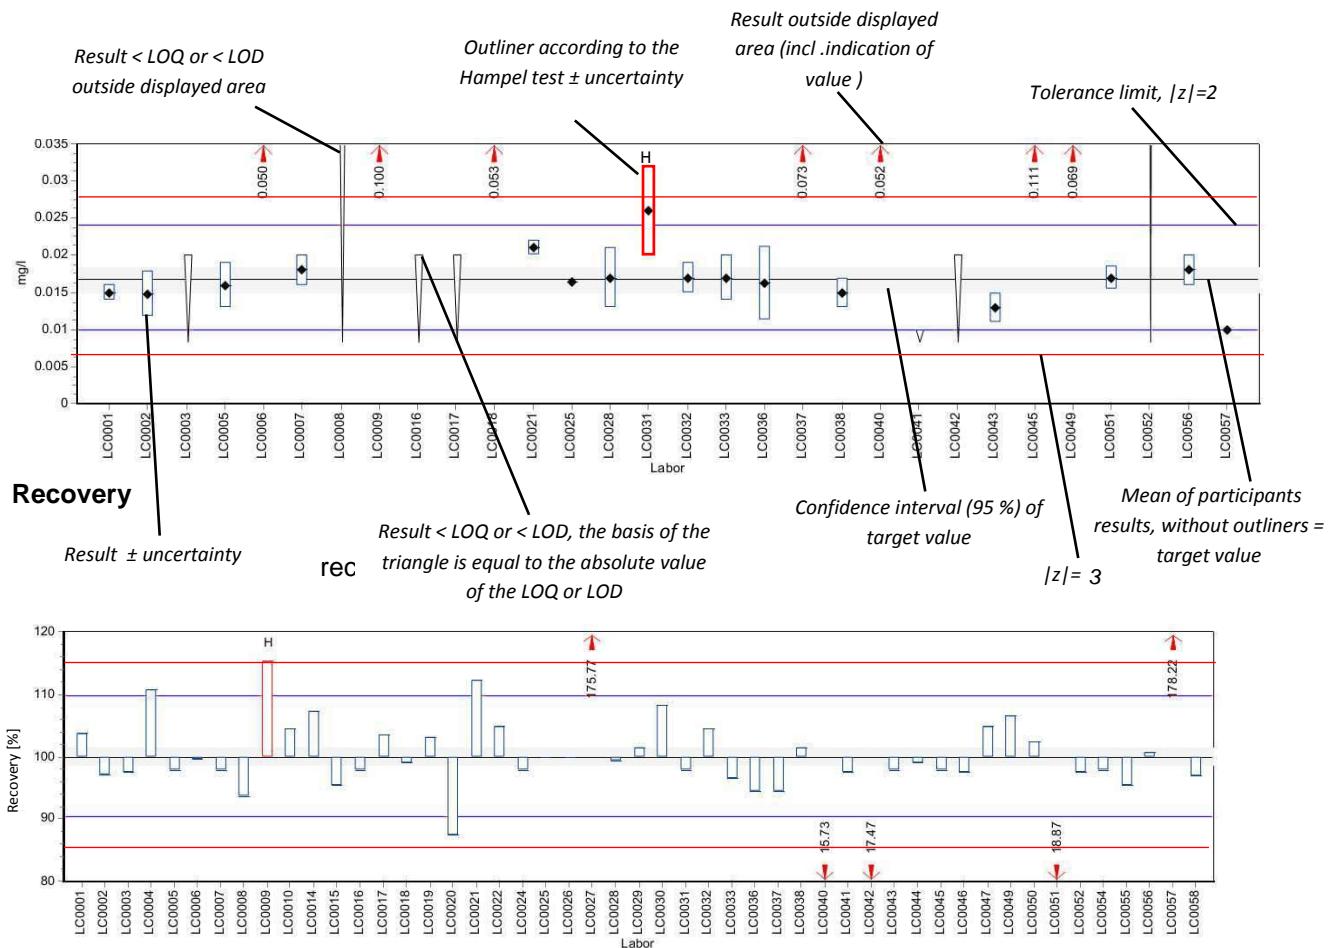

H      Outliner according to Hampel-Test

FN      False negative – For a result < LOQ (level of quantification): The absolute value of the LOD/LOQ fulfils the condition of an outlier according to the Hampel test.

FP      False positive – For parameters where no target value is available because of a too low analyte content (n < 6): Result that exceeds the median of the absolute values of the transmitted LOD/LOQs by more than 100 %.

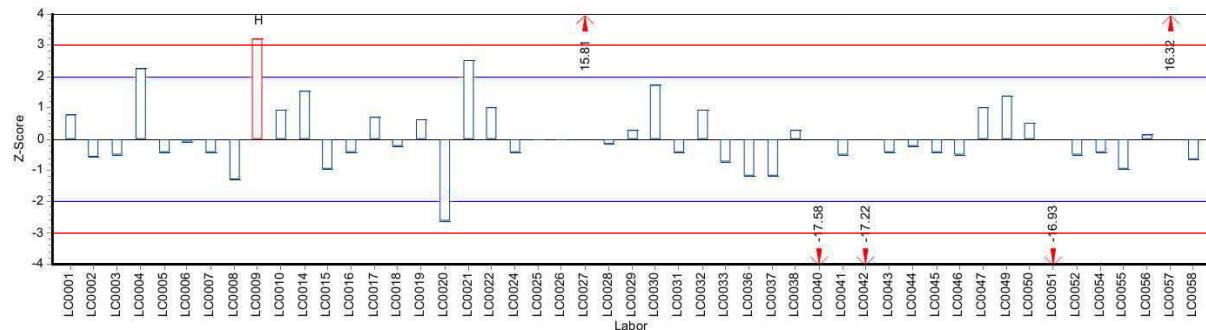

## Graphical presentation of results

### Results

### z-Score

Presentation of results as z-scores.

Summary of results, after removal of outliers: Pesticides H93
